

Systems Analysis Division (PB)

The Systems Analysis Division is delegated the responsibility to:

- Perform systems and mission assessments used to advocate, plan, develop, formulate, implement, and align the aerospace programs/projects assigned to the Center by the NASA Headquarters Mission Directorates in partnerships with the Divisions of the Programs and Projects Directorate.
- Manage the implementation of approved system and mission assessments, in-house and contacted, to ensure performance and deliverables consistent with submitted cost, schedule, and risk plans.
- Establish and maintains partnerships with the other organization in the Center performing research, development, project management, systems research and conceptual design.
- Establish and maintains partnerships with systems analysis groups at other NASA Centers, government agencies, industry, academia, and the community.

Systems Analysis Division (PB) con't

- Ensure expertise and tools required to perform systems and mission analyses are available.
- Report status of systems and mission assessments at GRC and Headquarters management/technical reviews as requested.
- Support the development of the strategic plan which sets out the Center's future goals and priorities in partnership with all Center organizations.
- Ensure that the division's workforce embraces and reflects the values of Safety, the NASA Family, integrity, and excellence in all the activities required for achieving the programmatic goals.
